

Filter *Sleeves*

Series PS

Features:
Economical
Reuseable
Efficient
Long Lasting

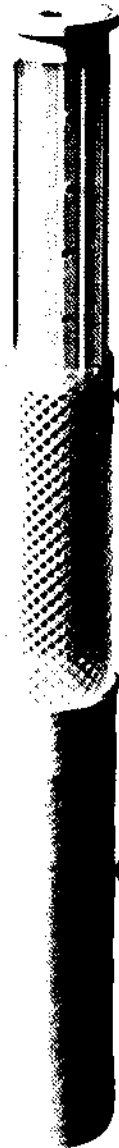

Penguin filter sleeves are economical, efficient and long lasting. The filter sleeves can be reused many times by simply flushing off the trapped solids from the sleeve. The filter sleeves will trap all solid particles larger than their given micron size. No precoat is necessary unless desired. When the retention of the sleeve is reduced due to continual flushings, only the sleeve itself needs to

be replaced. The polypropylene core is a one-time purchased piece which does not need to be replaced. Penguin filter sleeves are interchangeable with wound "depth type" cartridge filters and will fit all Penguin Series C filter chambers or any single or multi-tubed vessel. Penguin filter sleeves are available in 10", 20", 30" and 40" lengths, each with a choice of micron porosity.

Filter Sleeves

Series PS

Penguin Cores

Penguin filter cores are constructed of heavy duty polypropylene, consisting of a perforated shell with supporting core and two end caps. Each core is cut to an exact length for leakproof, positive filtration. Only a single initial purchase of a filter core is necessary. Penguin cores are available in 10", 20" 30" and 40" lengths. They are individually boxed to keep them clean and undamaged. Penguin filter cores are purchased separately from the filter sleeves.

Penguin Sleeves

Penguin filter sleeves are constructed of polypropylene heavy mat felt fibers, specially engineered to particulate porosity sizes of 2, 10, 25, and 50 micron. Each 10 inch length of filter sleeve supplies a very large filtration area which can handle high flow rates, high pressures, and temperatures up to 180°F. Flow rate capacities depend upon the micron size of the filter sleeve and the viscosity of the solution being filtered. The filter sleeves can easily be slipped over the filter core when replacement is required. Filter sleeves are purchased separately from filter cores.

EASY MEDIA CHANGE

- Remove end caps
- Slip on sleeve
- Replace caps
